

Weekly Diary – Week 18

Internship Organization: Vikaspedia

Duration: 18/05/2026 – 22/05/2026

Objective of the Week

The primary objective of this week was to initiate work on the Indian Language Web Index Programme by building a comprehensive inventory of Indian web domains across multiple sectors. The focus was on domain identification, classification, pilot crawling activities, sector-wise categorization, and preparation of production crawl batches for large-scale web data collection and analysis.

Date – 18 May

Work on the Indian Language Web Index Programme commenced. A domain source list was created using resources such as iGOD, National Portal, state government portals, .in domain references, IDN references, and sector-specific website directories. A domain inventory spreadsheet was designed with required metadata fields, and the first 100 manually verified domains were added. Priority websites were identified and marked for further analysis.

Date – 19 May

The domain inventory was significantly expanded by collecting domains from publicly available sources. More than 500 domains were added and systematically deduplicated to ensure data quality. Ownership classifications were assigned to the initial set of domains, and sector-based crawl categories including government, education, health, agriculture, finance, media, and other sectors were established.

Date – 20 May

A set of 100 pilot domains representing multiple sectors was selected for preliminary crawling activities. The pilot crawl process was coordinated and monitored to evaluate website accessibility and readiness for large-scale analysis. HTTP status codes, redirects, robots.txt restrictions, and crawl failures were recorded and documented. The generated page lists were prepared for subsequent content analysis tasks.

Date – 21 May

The domain inventory was further expanded toward the target range of 1,500–2,000 domains. Sector tagging and classification accuracy were improved for priority websites to support future analytical work. Retry strategies and rules were defined for pages that failed during pilot crawling, and the first production crawl batch was prepared for execution.

Date – 22 May

Version 1 of the domain inventory was finalized after verification and quality checks. Production Crawl Batch 1 and Batch 2 were completed and reviewed. Pilot crawl issues, observations, and mitigation strategies were documented to improve future crawling efficiency. A demonstration of the domain inventory management process and crawl workflow was presented, marking the successful completion of the first phase of the Indian Language Web Index Programme.
