

Weekly Diary – Week 19

Internship Organization: Vikaspedia

Duration: 25/05/2026 – 29/05/2026

Objective of the Week

The primary objective of this week was to execute large-scale production crawling activities for the Indian Language Web Index Programme. The focus was on expanding web coverage, monitoring crawl performance, identifying coverage gaps across sectors and languages, improving domain classification, and preparing targeted datasets for further language analysis and validation.

Date – 25 May

Production Crawl Batch 1 was executed across the finalized domain inventory. Crawl performance was continuously monitored to identify failures, rate-limiting issues, and accessibility constraints. Crawl status reports were updated at regular intervals throughout the day, and preparations were initiated for the execution of the second production crawl batch.

Date – 26 May

Production Crawl Batch 2 was successfully completed. Domains that had failed during previous crawl attempts were retried using updated crawl configurations and retry rules. Additional domains discovered during the crawling process were added to the inventory, and sector tagging accuracy was improved for high-priority websites to strengthen data classification.

Date – 27 May

Production Crawl Batch 3 was conducted to further expand website coverage. The domain inventory was reviewed to identify gaps across sectors, states, and language representation. A targeted discovery list was created for under-represented Indian languages, and the list was prepared and shared for language validation and verification activities.

Date – 28 May

Production Crawl Batch 4 was executed as part of the large-scale data collection process. Crawl coverage was analyzed across different sectors and ownership categories to ensure balanced representation. Domains experiencing repeated crawl failures were re-evaluated, and detailed documentation was prepared outlining crawl exclusions, technical limitations, and accessibility challenges encountered during the process.

Date – 29 May

A comprehensive review of crawl coverage and identified gaps was presented to the project team. Final production crawl targets were prepared to conclude the current crawling phase and support upcoming analysis activities. A targeted re-crawl list was generated for priority domains requiring additional data collection, and a curated subset of priority government websites was prepared and shared for further processing and evaluation.
