

Weekly Diary – Week 20

Internship Organization: Vikaspedia

Duration: 01/06/2026 – 05/06/2026

Objective of the Week

The primary objective of this week was to complete the domain inventory and web crawling phase of the Indian Language Web Index Programme. The focus was on executing final targeted crawls, validating crawl results, resolving anomalies, documenting limitations, finalizing methodology notes, and preparing foundational material for the reporting and analysis phase of the project.

Date – 01 June

A targeted final crawl batch was executed to improve coverage of priority websites and address remaining gaps in the dataset. The priority government website crawl subset was completed and reviewed for completeness. A draft version of the final crawl manifest was prepared and shared for further validation, while unresolved crawl failures and access issues were documented for future reference.

Date – 02 June

Targeted re-crawls were completed for domains requiring additional data collection and verification. Crawl manifest paths, URLs, and associated metadata were thoroughly reviewed to ensure consistency and accuracy. Final crawl status labels were assigned to completed domains, and support was provided in investigating and resolving crawl anomalies identified during quality checks.

Date – 03 June

Domain classifications associated with anomaly reports were validated and reviewed for correctness. Sector-level coverage was analyzed to determine whether identified gaps reflected genuine ecosystem limitations or weaknesses in the domain inventory. A detailed crawl limitations note was drafted, and the final export version of the domain inventory dataset was prepared.

Date – 04 June

The domain inventory and crawl manifest were finalized following comprehensive verification and review. Excluded domains were checked to ensure that each exclusion had a documented reason and supporting evidence. An outline for the Domain Inventory chapter was prepared, highlighting key statistics, findings, and inventory metrics. Crawl-related dashboard tables and summary outputs were also reviewed for consistency and accuracy.

Date – 05 June

Final Domain Inventory documentation and Crawl Methodology notes were completed and consolidated. Final crawl statistics and coverage numbers were prepared along with appropriate caveats and methodological considerations. Charts and visualizations related to domain counts, sector distribution, and crawl outcomes were reviewed and validated. A chapter draft plan was prepared to support the next phase of report writing and analytical documentation.
