

Weekly Diary – Week 17

Internship Organization: Vikaspedia

Duration: 12/05/2026 – 17/05/2026

Objective of the Week

The primary objective of this week was to finalize advanced keyword intelligence features, optimize system performance, and complete project testing and documentation. The focus was on improving keyword analytics, clustering functionality, and preparing the project for final presentation and submission.

Date – 12 May

Keyword clustering functionality was implemented to group generated keywords based on concept similarity, search patterns, and popularity tiers. This improved keyword organization and made analysis more user-friendly.

Date – 13 May

Internal search analytics tracking was developed to store user search activity and generated keyword interactions. Analytics storage functionality was connected with the MySQL database for future auto-suggest improvements.

Date – 14 May

Auto-suggest functionality was implemented using internal analytics data and cached keyword history. Frequently searched keywords and related suggestions were dynamically generated for improved user experience.

Date – 15 May

Performance optimization and backend cleanup were completed. API response times were improved through optimized caching, reduced redundant processing, and better handling of keyword validation workflows.

Date – 16 May

Comprehensive system testing was conducted across frontend, backend, database, and Redis integration. Error handling, API reliability, keyword accuracy, and cache consistency were verified successfully.

Date – 17 May

Final project documentation and presentation materials were prepared. The complete project source code and supporting files were organized and uploaded to GitHub and Google Drive for submission and future reference.
